**Definition of Weighted Average Maturity and Weighted Average Life

WAM is the mean average of the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid, (b) would be repaid upon a demand by TexPool, or (c) are scheduled to have their interest rate readjusted to reflect current market rates. Securities with adjustable rates payable upon demand are treated as maturing on the earlier of the two dates set forth in (b) and (c) if their scheduled maturity is 397 days or less; and the later of the two dates set forth in (b) and (c) if their scheduled maturity is more than 397 days. The mean is weighted based on the percentage of the amortized cost of the portfolio invested in each period.

WAL is calculated in the same manner as WAM, but is based solely on the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid or (b) would be repaid upon a demand by TexPool, without reference to when interest rates of securities within TexPool are scheduled to be readjusted.
